

HK MODULAR

HK Modular is an industrial typeface that performs really well as a display, title, or poster type. HK Modular sports a regular cut and a rounded-corners design. It is both futuristic and retro—depending on the usage.

AA

STRATUM NO 2

Stratum 2 is a geometric sans-serif typeface designed by Eric Olson and released through Process Type Foundry in 2004. Olson set out to design a geometric sans with a lowercase that remained legible while still matching the geometry of the uppercase. Stratum 2 is available in six weights but without any italics (which would probably look really weird in this style of geometric sans anyway).

AA

TEG

TEG™ is a modern sans serif that bridges the gap between stylistic geo sans and grotesque type design. It has a strong mono-linear design, a combination of sharp, and rounded curves which gives TEG™ a futuristic and classic grotesque feel.
